

SIBO-IMO Test Results

Before and after six-week treatment regimen

At-home breath test for small intestinal bacterial overgrowth (SIBO) and intestinal methanogen overgrowth (IMO) using lactulose as substrate was performed on patient before and after the following six-week regimen: berberine, 500 mg, tid; oil of oregano, bid; FODMAP-free diet and digestive enzymes with meals.

Note: this is one of several regimens used to successfully manage and treat SIBO.
